

```
.clearfix::after {
    content: "";
    clear: both;
    display: table;
}
</style>
</head>
<body>
<h2>Grid of Boxes</h2>
<p>Float boxes side by side:</p>
<div class="clearfix">
  <div class="box" style="background-color:#bbb">
    <p>Some text inside the box.</p>
  </div>
  <div class="box" style="background-color:#ccc">
    <p>Some text inside the box.</p>
  </div>
  <div class="box" style="background-color:#ddd">
    <p>Some text inside the box.</p>
  </div>
</div>
<p>
  Note that w also us the clearfix hack to take care of the layout
  flow, and that add the box-sizing property to make sure that the box doesn't
  break due to extra padding. Try to remove this
  code to see the effect.
</p>
</body>
</html>
```
