Grid of Boxes / Equal Width Boxes

float

```
<!DOCTYPE html>
<html lang="en">

<head>
  <meta charset="UTF-8">
  <meta http-equiv="X-UA-Compatible" content="IE=edge">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>Grid of Boxes</title>
  <style>
    * {
      box-sizing: border-box;
    }

    .box {
      float: left;
      width: 33.33%; /* 3          , 4          25%, 2          50% */
      padding: 50px;
    }
  </style>

```

```
.clearfix::after {
    content: "";
    clear: both;
    display: table;
}
</style>
</head>

<body>

<h2>Grid of Boxes</h2>
<p>Float boxes side by side:</p>

<div class="clearfix">
    <div class="box" style="background-color:#bbb">
        <p>Some text inside the box.</p>
    </div>
    <div class="box" style="background-color:#ccc">
        <p>Some text inside the box.</p>
    </div>
    <div class="box" style="background-color:#ddd">
        <p>Some text inside the box.</p>
    </div>
</div>

<p>
    Note that we also use the clearfix hack to take care of the layout
    flow, and that we add the box-sizing property to make sure that the box doesn't
    break due to extra padding. Try to remove this
    code to see the effect.
</p>

</body>

</html>
```

```
</html>
```

Equal Height Boxes

, quick fix

```
<!DOCTYPE html>
<html lang="en">

<head>
  <meta charset="UTF-8">
  <meta http-equiv="X-UA-Compatible" content="IE=edge">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>Equal Height Boxes</title>
  <style>
    * {
      box-sizing: border-box;
    }

    .box {
      float: left;
      width: 50%;
      padding: 50px;
      height: 300px;
    }

    .clearfix::after {
      content: "";
      clear: both;
    }
  </style>
</head>
<body>
  <div>
    <div class="box">
      <img alt="Placeholder for image" data-bbox="100 100 200 200"/>
    </div>
    <div class="box">
      <img alt="Placeholder for image" data-bbox="300 100 400 200"/>
    </div>
  </div>
</body>
</html>
```

```

        display: table;
    }
</style>
</head>

<body>

    <h2>Equal Height Boxes</h2>
    <p>Floating boxes with equal heights</p>

    <div class="clearfix">
        <div class="box" style="background-color:#bbb">
            <h2>Box01</h2>
            <p>Some content, some content, some content</p>
        </div>
        <div class="box" style="background-color:#ccc">
            <h2>Box02</h2>
            <p>Some content, some content, some content</p>
            <p>Some content, some content, some content</p>
            <p>Some content, some content, some content</p>
        </div>
    </div>

    <P>
        This example is not very flexible. It is ok to use CSS height if you
        can guarantee that the boxes will always have the same amount of content in
        them, but that's not always the case. If you
        try the example above on a mobile phone (or resize the browser
        window), you will see that the second box's content will be displayed
        outside of the box.
    </P>
    <p>
        Go back to the tutorial and find another solution, if this is not
        what you want.
    </p>
</body>

CSS3 Flexbox가

```

<!DOCTYPE html>
<html lang="en">

```

```
<head>
  <meta charset="UTF-8">
  <meta http-equiv="X-UA-Compatible" content="IE=edge">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>Flexible Boxes</title>
  <style>
    .flex-container {
      display: flex;
      flex-wrap: nowrap;
      background-color: dodgerblue;
    }

    .flex-container .box {
      background-color: #f1f1f1;
      width: 50%;
      margin: 10px;
      text-align: center;
      line-height: 75px;
      font-size: 30px;
    }
  </style>
</head>

<body>

  <div class="flex-container">
    <div class="box">
      Box 01 - This is some text to make sure that the content gets
      really tall. This is some text to make sur that the content gets really
      tall.
    </div>
    <div class="box">
      Box 02 - My height will follow Box 01.
    </div>
  </div>

  <p>Try to resize the browser window to see the flexible layout.</p>
  <p>
    <strong>Note:</strong>Flexbox is not supported in Internet Explorer
    10 or earlier versions.
  </p>

</body>

</html>
```
