# CSS Overflow

CSS overflow

```
<!DOCTYPE html>
<html lang="en">

<head>
  <meta charset="UTF-8">
  <meta http-equiv="X-UA-Compatible" content="IE=edge">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>CSS Overflow</title>
  <style>
    #overflowTest {
      background-color: #4caf50;
      color: white;
      padding: 15px;
      width: 50%;
      height: 100px;
      border: 3px solid crimson;
      overflow: scroll; /* */
    }
  </style>
</head>
<body>
  <div id="overflowTest">
    <div style="background-color: white; color: black; padding: 5px; width: 100%; height: 100%; border: 1px solid black; border-radius: 5px; display: flex; align-items: center; justify-content: center; text-align: center; font-size: 1.2em; font-weight: bold;">
      CSS Overflow
    </div>
  </div>
</body>
</html>
```

```

        #overflowTest strong {
            color: black;
        }
    </style>
</head>

<body>

    <h2>CSS Overflow</h2>
    <p>
        The overflow property controls what happens to content that is too
        big to fit into an area.
    </p>

    <div id="overflowTest">
        <strong>This text is really long and the height of its container is
        only 100 pixels. Therefore, a scrollbar is
        added to help the reader to scroll the content.</strong>Lorem ipsum

    </div>

</body>

</html>

```

overflow 가  
가

overflow

- "visible" - ( )
- "hidden" = , 가 가
- "scroll" - , 가 가
- "auto" - scroll 가

**Note:**overflow 가 .

**Note:**Mac X Lion OS , ,  
.(“overflow:scroll” )

## overflow: visible

overflow visible , ,  
.

```

<!DOCTYPE html>
<html lang="en">

<head>
  <meta charset="UTF-8">
  <meta http-equiv="X-UA-Compatible" content="IE=edge">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>Overflow</title>
  <style>
    div {
      background-color: lightgray;
      width: 200px;
      height: 50px;
      border: 1px solid black;
      overflow: visible;
    }
  </style>
</head>

<body>

  <h2>CSS Overflow</h2>
  <p>
    By default, the overflow is visible, meaning that it is not clipped
    and it renders outside the element's box:
  </p>
  <div>
    You can use the overflow property when you want to have better
    control of the layout. The overflow property
    specifies what happens if content overflows an element's box.
  </div>

</body>

```

</html>

## Overflow: hidden

hidden 가 , , ::

```

<!DOCTYPE html>
<html lang="en">

<head>
  <meta charset="UTF-8">
  <meta http-equiv="X-UA-Compatible" content="IE=edge">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>overflow: hidden</title>
  <style>
    div {
      background-color: lightgrey;
      width: 200px;
      height: 50px;
      border: 2px dotted black;
      overflow: hidden;
    }
  </style>
</head>

<body>

  <h2>CSS Overflow: hidden</h2>
  <p>
    With th hidden value, the overflow is clipped, and the rest of the
    content is hidden:
  </p>
  <p>Try to remove the overflow property to understand how it works.</p>

  <div>
    You can use the overflow property when you want to have better
    control of the layout. The overflow property
    specifies what happens if content overflows an element's box.
  </div>

</body>

```

</html>

## overflow: scroll

scroll , 가 , 가 가 . 가 가

```

<!DOCTYPE html>
<html lang="en">

<head>
  <meta charset="UTF-8">
  <meta http-equiv="X-UA-Compatible" content="IE=edge">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>overflow: scroll</title>
  <style>
    div {
      background-color: lightgrey;
      width: 200px;
      height: 100px;
      border: 2px dotted redd;
      overflow: scroll;
    }
  </style>
</head>

<body>

  <h2>CSS Overflow</h2>
  <p>
    Setting the overflow value to scroll, the overflow is clipped and a
    scrollbar is added to scroll inside the box.
    Note that this will add a scrollbar both horizontally and vertically
    (even if you do not need it):
  </p>

  <div>
    You can use the overflow property when your want to haver better
    control of the layout. The overflow property
    specifies what happens if content overflows an element's box.
  </div>

</body>

```

```
</html>
```

## overflow: auto

auto scroll , 가 .

```

<!DOCTYPE html>
<html lang="en">

<head>
  <meta charset="UTF-8">
  <meta http-equiv="X-UA-Compatible" content="IE=edge">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>Overflow: auto</title>
  <style>
    div {
      background-color: lightgray;
      width: 200px;
      height: 50px;
      border: 3px solid crimson;
      overflow: auto;
    }
  </style>
</head>

<body>

  <h2>CSS Overflow: auto</h2>
  <p>
    The auto value is similar to scroll, only it adds scrollbars when
    necessary:
  </p>

  <div>
    You can use the overflow property when you want to have better
    control of the layout. The overflow property
    specifies what happens if content overflows an element's box.
  </div>

</body>

```

</html>

## Overflow-x and overflow-y

overflow-x overflow-y 가 ( )

overflow-x / 가 .

overflow-y / 가 .

```

<!DOCTYPE html>
<html lang="en">

<head>
  <meta charset="UTF-8">
  <meta http-equiv="X-UA-Compatible" content="IE=edge">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>overflow-x and overflow-y</title>
  <style>
    div#overflow-x {
      background-color: lightgray;
      width: 200px;
      height: 50px;
      border: 2px dotted crimson;
      overflow-x: scroll; /* Add horizontal scrollbar */
      overflow-y: hidden; /* Hide vertical scrollbar */
    }

    div#overflow-y {
      background-color: lightgray;
      width: 200px;
      height: 50px;
      border: 2px dotted blue;
      overflow-x: hidden; /* Hide horizontal scrollbar */
      overflow-y: scroll; /* Add vertical scrollbar */
    }
  </style>
</head>

<body>

  <h2>CSS overflow-x and overflow-y</h2>
  <p>You can also change the overflow of content horizontally or

```

```
vertically.</p>
  <p>overflow-x specifies what to do with the left/right edges of the
content.</p>
  <p>overflow-y specifies what to do with the top/bottom edges of the
content.</p>
  <br>
  <strong>overflow-x</strong>
  <div id="overflow-x">
    You can use the overflow property when you want to have better
control of the layout. The overflow property
    specifies what happens if content overflows an element's box.
  </div>
  <br>
  <strong>overflow-y</strong>
  <div id="overflow-y">
    You can use the overflow property when you want to have better
control of the layout. The overflow property
    specifies what happens if content overflows an element's box.
  </div>
</body>
</html>
```

## All CSS Overflow Properties

Property	Description
overflow	가 .
overflow-x	가 / 가
overflow-y	가 / 가
