MySQL 5.6 Reference Manual

INSERT Statement

INSERT ...SELECT Statement

The target table of the INSERT statement may appear in the FROM clause of the SELECT part of the query.

However, you cannot insert into a table and select from the same table in a subquery.

```
INSERT INTO table_name (column_name, ...)
SELECT table_name.column_name, ...
FROM table_name
```

To avoid ambiguous column reference problems when the SELECT and the INSERT refer to the same table, provide a unique alias for each table used in the SELECT part, and qualify column names in that part with the appropriate alias.

```
SELECT table_name.column_name, ...
INSERT INTO table_name (column_name, ...)
SELECT table_name.column_name, ...
FROM table_name AS (alias, ...)
```

< > (java.sql.exception:Invalid use of group function)

```
INSERT INTO CHECKLIST (CHECKLIST_ORDER, CHECKLIST_TITLE, CHECKLIST_ITEMS)
VALUES (
  (SELECT MAX(CHECKLIST_ORDER) FROM CHECKLIST) + 1
  , '[Test]'
  , '# '
);
<!-- INSERT table_name, CHECKLIST CHECKLIST_ORDER SELECT
1 CHECKLIST_ORDER -->
```

<!-- !!! -->

< >

```
INSERT INTO CHECKLIST (CHECKLIST_ORDER, CHECKLIST_TITLE, CHECKLIST_ITEMS)
VALUES (
    (SELECT MAX(C.CHECKLIST_ORDER) FROM CHECKLIST C) + 1
    , '[Test]'
    , '# '
);
<!-- INSERT 1 , CHECKLIST CHECKLIST_ORDER CHECKLIST_ORDER SELECT -->
<!-- !!! -->
```
