

1) Ctrl + Shift + T for finding a class even from a JAR file This keyboard shortcut in Eclipse is my most used and favorite shortcut. While working with a high-speed trading system that has a complex code, I often need to find classes with the just blink of the eye, and this Eclipse keyboard shortcut is just made for that. No matter whether you have a class in your application or inside any JAR in the workspace, this shortcut will find it.

2) Ctrl + Shift + R for finding any resource (file) including config xml files This is similar to the above Eclipse shortcut with the only difference that it can find out not only Java files but any files, including XML, configs, and many others, but this eclipse shortcut only finds files from your workspace and doesn't dig at the JAR level.

3) Ctrl + 1 for quick fix This is another beautiful Eclipse shortcut that can fix up any error for you in Eclipse. Whether it's missing declaration, missing semi-colon, or any import related error, this eclipse shortcut will help you to quickly sort that out.

4) Ctrl + Shift + o for organize imports Another Eclipse keyboard shortcut for fixing missing imports. Particularly helpful if you copy some code from other files and what to import all dependencies.

### **Eclipse Shortcut for Quick Navigation**

7) Ctrl + o for quick outline going quickly to a method

9) Alt + right and Alt + left for going back and forth while editing.

12) Alt + Shift + W to show a class in the package explorer
