## HTML Images Syntax

HTML <img>

<img>

<img> , , (closing tag)가

<img> 2

- src - (path)
- alt -

Syntax( , )

```

```

## The src Attribute

src (URL)

### Note:

가 가

, 가

가 , alt 가

# The alt Attribute

The alt attribute is used to describe an image. It is placed inside the image tag, after the src attribute, and is enclosed in quotation marks. The alt attribute is used to provide a text description of the image, which is displayed if the browser cannot find the image.

If a browser cannot find the image, it will display the alternate text:

### Tip:

Use the alt attribute to describe the image for screen readers. This is important for accessibility. The alt attribute is used to provide a text description of the image, which is displayed if the browser cannot find the image.

# Image Size - Width and Height

The width and height attributes are used to specify the size of the image. They are placed inside the image tag, after the alt attribute, and are enclosed in quotation marks. The style attribute is used to specify the width and height of the image in pixels.

```
<img src = "img_girl.jpg" alt="Girl in a jacket" style="width:500px; height:600px;">
```

The width and height attributes are used to specify the size of the image. They are placed inside the image tag, after the alt attribute, and are enclosed in quotation marks.

```

```

The width and height attributes are used to specify the size of the image. They are placed inside the image tag, after the alt attribute, and are enclosed in quotation marks.

### Note:

The width and height attributes are used to specify the size of the image. They are placed inside the image tag, after the alt attribute, and are enclosed in quotation marks.

# Width and Height, or Style?

The width, height, and style attributes are used to specify the size of the image. They are placed inside the image tag, after the alt attribute, and are enclosed in quotation marks. The style attribute is used to specify the width and height of the image in pixels.

```
/* This style sets the width of all images to 100%: */ img { width: 100%; }
```

## Width/Height Attribute or Style?

The first image uses the width attribute (set to 128 pixels), but the style in the head section overrides it, and sets the width to 100%;

The second image uses the style attribute to set the width to 128 pixels, this will not be overridden by the style in the head section:

## Images in Another Folder

가 , src .

```

```

## Images on Another Server/Website

가 .

가 , src (an absolute (full) URL) .

```

```

### Note on external images

가 .

## Animated Images

HTML GIF .

```

```

# Image as a Link

, <img> <a> .

# Image as a Link

The image is a link. You can click on it.

# Image Floating

CSS float 가 .
