Util

```java
    public static String calculateTime(String dateString) throws
ParseException
    {

    SimpleDateFormat format = new SimpleDateFormat("yyyy-MM-dd HH:mm:ss");

    Date date = format.parse(dateString);

    long curTime = System.currentTimeMillis();
    long regTime = date.getTime();
    long diffTime = (curTime - regTime) / 1000;

//        System.out.println("dateString : "+dateString);
//        System.out.println("date.getTime : "+date.getTime());
//        System.out.println("curTime : "+curTime);

    String msg = null;

    if (diffTime < TIME_MAXIMUM.SEC)
    {
        // sec
        msg = diffTime + "    ";
    }
    else if ((diffTime /= TIME_MAXIMUM.SEC) < TIME_MAXIMUM.MIN)
    {
        // min
        System.out.println(diffTime);

        msg = diffTime + "    ";
    }
    else if ((diffTime /= TIME_MAXIMUM.MIN) < TIME_MAXIMUM.HOUR)
```

```
    {
        // hour
        msg = (diffTime ) + "        ";
    }
    else if ((diffTime /= TIME_MAXIMUM.HOUR) < TIME_MAXIMUM.DAY)
    {
        // day
        msg = (diffTime ) + "     ";
    }
    else if ((diffTime /= TIME_MAXIMUM.DAY) < TIME_MAXIMUM.MONTH)
    {
        // day
        msg = (diffTime ) + "     ";
    }
    else
    {
        msg = (diffTime) + "     ";
    }

    return msg;
 }
```

Tip

> Date   .
> rwiki   String   .
