## The source of this article

### Javascript Object Constructors

```
// Constructor function for Person Objects
function Person(first, last, age, eye) {
  this.firstName = first;
  this.lastName = last;
  this.age = age;
  this.eyeColor = eye;
}

// Create a Person object
let myFather = new Person("Anthony", "Young", 50, "green");

// Display age
document.getElementById("demo").innerHTML =
  "My father is " + myFather.age + ".";      // My father is 50.
```

(constructor function)

## Object Types (Blueprints) (Classes)

(JS Object Constructors)

"type"

" (object constructor function)

function Person()

new

```
// Constructor function for Person objects
function Person(first, last, age, eye) {
  this.firstName = first;
  this.lastName = last;
  this.age = age;
  this.eyeColor = eye;
}

// Create two person objects
let myFather = new Person("John", "Doe", 50, "blue");
let myMother = new Person("Sally", "Rally", 48, "green");

// Display age
document.getElementById("demo").innerHTML =
  "My father is " + myFather.age + ". My mother is " + myMother.age + ".";
// My father is 50. My mother is 48.
```

## The this Keyword

JavaScript      this

“ ”

this

.

, this

this

가

,

가

.

'this'

가

.

'this'

.

## Adding a Property to an Object

가

.

### Example

```
// Constructor function for Person objects
function Person(first, last, age, eye) {
  this.firstName = first;
```

```

    this.lastName = last;
    this.age = age;
    this.eyeColor = eye;
}

// Create 2 Person objects
let myFather = new Person("John", "Doe", 50, "blue");
let myMother = new Person("Sally", "Rally", 48, "green");

// Add nationality to first object
myFather.nationality = "English";

// Display nationality
document.getElementById("demo").innerHTML =
    "My father is " + myFather.nationality;    // My father is English

```

myMother가 ( person 가 ) myFather 가 .

## Adding a Method to an Object

가 :

### Example

```

// Constructor function for Person Objects
function Person(first, last, age, eye) {
    this.firstName = first;
    this.lastName = last;
    this.age = age;
    this.eyeColor = eye;
}

// Create 2 Person objects
let myFather = new Person("John", "Doe", 50, "blue");
let myMother = new Person("Sally", "Field", 48, "green");

// Add a name method to first object
myFather.name = function () {
    return this.firstName + " " + this.lastName;
};

// Display full Name
document.getElementById("demo").innerHTML =
    "My father is " + myFather.name();    // My father is John Doe

```

# Adding a Property to a Constructor

가

가

## Example

```
// Constructor function for Person objects
function Person(first, last, age, eye) {
  this.firstName = first;
  this.lastName = last;
  this.age = age;
  this.eyeColor = eye;
}

// You can NOT add a new property to a constructor function
Person.nationality = "English";

// Create 2 Person objects
let myFather = new Person("John", "Doe", 50, "blue");
let myMother = new Person("Sally", "Rally", 48, "green");

// Display nationality
document.getElementById("demo").innerHTML =
  "The nationality of my Father is " + myFather.nationality;
  // The nationality of my Father is undefined
```

가

,

가

.

## Example

```
// Constructor function for Person objects
function Person(first, last, age, eye) {
  this.firstName = first;
  this.lastName = last;
  this.age = age;
  this.eyeColor = eye;
  this.nationality = "English";
}

// Create 2 Person objects
let myFather = new Person("John", "Doe", 50, "blue");
let myMother = new Person("Sally", "Rally", 48, "green");

// Display nationality
```

```
document.getElementById("demo").innerHTML =  
  "My father is " + myFather.nationality + ". My mother is " +  
  myMother.nationality;  
  // My father is English. My mother is English
```

(default values) 가 .

## Adding a Method to a Constructor

### Example

가 .

가 .

### Example

changeName() person lastName .

### Now You Can Try:

JavaScript **this** myMother “ ” person .

## Built-in JavaScript Constructors

JavaScript (built-in constructor)가 .

## Example

## Did You Know?

	JavaScript	(primitive data types)
String, Number	Boolean	.
	가	(primitive values)
:		
new Object()	{}	.
new String()	" "	.
new Number()	12345	.
new Boolean()	true / false	.
new Array()	[]	.
new RegExp()	/()/	.
new Function()	() {}	.
