## jQuery .data()

Store arbitrary data associated with the matched elements

```

    .data(key, value)

```

or return the value at the named data store for the first element in the set of matched elements.

```

    .data()

```

```

.data(key, value)

```

```

$( "body" ).data( "foo", 52 );
$( "body" ).data( "bar", { isManual: true } );
$( "body" ).data( { baz: [ 1, 2, 3 ] } );
$( "body" ).data( "foo" ); // 52
$( "body" ).data(); // { foo: 52, bar: { isManual: true }, bar: [ 1, 2 ,3 ]
}

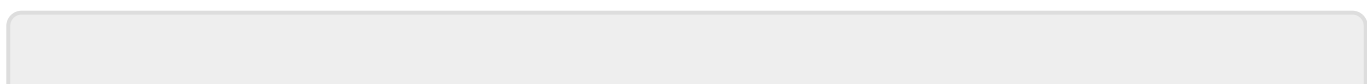

```

Using the data() method to update data does not affect attributes in the DOM. To set a data-\* attribute value, use attr.

<b>data()</b>		DOM	<b>. data-*</b>
	<b>attr</b>	.
