getNextValidTimeAfter()

Quartz cron , Quartz
CronExpression .

```

@Test
public void cronTimeTest() throws ParseException {
    // 9, 12, 18
    String cronExample = "0 0 9,12,18 * * ?";

    CronExpression cronExpression = new CronExpression(cronExample);
    log.debug("cronExpression=[{}]", cronExpression);
    //cronExpression=[0 0 9,12,18 * * ?]

    Date nextTime1 = cronExpression.getNextValidTimeAfter(new Date());
    log.debug("nextTime1=[{}]", nextTime1);
    //nextTime1=[2022-07-01T09:00:00.000+0900]

    Date nextTime2 = cronExpression.getNextValidTimeAfter(nextTime1);
    log.debug("nextTime2=[{}]", nextTime2);
    //nextTime2=[2022-07-01T12:00:00.000+0900]

    Date nextTime3 = cronExpression.getNextValidTimeAfter(nextTime2);
    log.debug("nextTime3=[{}]", nextTime3);
    //nextTime3=[2022-07-01T18:00:00.000+0900]

    Date nextTime4 = cronExpression.getNextValidTimeAfter(nextTime3);
    log.debug("nextTime4=[{}]", nextTime4);
    //nextTime4=[2022-07-02T09:00:00.000+0900]

    boolean compareResult = nextTime2.equals(nextTime3);
    assertEquals(compareResult, true);
}

```

```
@Test
public void          () throws Exception {
    String cronEx = "0 59 23 ? * 2";
    int dayOffset = 2;

    SimpleDateFormat dateFormat = new SimpleDateFormat("yyyyMMdd",
Locale.getDefault());

    Calendar cal = Calendar.getInstance();
    cal.setTime(new Date());
    log.debug("cal.getTime()=[{}]", cal.getTime());
    //          cal
    //cal.getTime()=[2022-07-01T10:52:04.257+0900]

    cal.add(Calendar.DATE, dayOffset);
    log.debug("dayOffset=[{}], cal.getTime() after add dayOffset=[{}]",
dayOffset, cal.getTime());
    //          dayOffset
    //dayOffset=[2], cal.getTime() after add
dayOffset=[2022-07-03T10:52:04.257+0900]

    CronExpression cronExpression = new CronExpression(cronEx);
    log.debug("cronExpression=[{}]", cronExpression);
    //String          cronEx
    //cronExpression=[0 59 23 ? * 2]

    Date cronDate = cronExpression.getNextValidTimeAfter(cal.getTime());
    log.debug("cronDate=[{}]", cronDate);
    //(          +dayOffset)
    //cronDate=[2022-07-04T23:59:00.000+0900]

    String cronDateStr = dateFormat.format(cronDate);
    log.debug("cronDateStr=[{}]", cronDateStr);
    //(          +dayOffset)                                yyyyMMdd

    //cronDateStr=[20220704]

    String compareDateStr = dateFormat.format(cal.getTime());
    log.debug("compareDateStr=[{}]", compareDateStr);
    //(          +dayoffset)                                yyyyMMdd
    //compareDateStr=[20220703]

    log.debug("cronDateStr=[{}] <<>> compareDateStr=[{}]", cronDateStr,
compareDateStr);
    //cronDateStr=[20220704] <<>> compareDateStr=[20220703]

    boolean compareResult = cronDateStr.equals(compareDateStr);
    //boolean ret = CrontabUtil.isMatchCronExpression(cronExpression,
dayOffset);
```

```
assertEquals(compareResult, true); // Failure  
}
```
