[DateFormat format\(\) Method in Java with Examples](#)

()

java.text DateFormat

DateFormat / , , . .

DateFormat Format . . Format

DateFormat

Java DateFormat format() /

mm/dd/yyyy

```
import java.text.DateFormat;
import java.util.Calendar;

public class GFG {

    public static void main(String[] args) {

        // Initializing the first formatter
        DateFormat DFormat = DateFormat.getDateInstance();

        // Initializing the calendar Object
        Calendar cal = Calendar.getInstance();
```

```
// Displaying the actual date
System.out.println("Output:: The original Date: " + cal.getTime());
// Output:: The original Date: Tue Jun 21 19:14:40 KST 2022

// Converting date using format() method
String currentDate = DFormat.format(cal.getTime());

// Printing the formatted date
System.out.println("Output:: Formatted Date: " + currentDate);
// Output:: Formatted Date: 2022. 6. 21.
}
}
```

```
import java.text.DateFormat;
import java.util.Calendar;
import java.util.Locale;

public class GFG2 {

    public static void main(String[] args) {

        // Initializing the first formatter
        DateFormat DFormat = DateFormat.getDateInstance(DateFormat.LONG,
        DateFormat.LONG, Locale.getDefault());

        // Initializing the calendar Object
        Calendar cal = Calendar.getInstance();

        // Displaying the actual date
        System.out.println("The original date is " + cal.getTime());
        // The original date is Tue Jun 21 19:26:05 KST 2022

        // Converting date using format() method and storing date in a
string
        String nowDate = DFormat.format(cal.getTime());
        // Formatted Date is 2022 6 21 7 26 5 KST

        // Printing the formatted date on console
        System.out.println("Formatted Date is " + nowDate);
    }
}
```

Reference

* Calendar

```
static Calendar getInstance() : 가 Calendar
```

```
void setTime(Date date) : date
```

* Calendar

```
Calendar.DATE :
```
