Java SimpleDateFormat

SimpleDateFormat

가 Date

Constructors:

SimpleDateFormat(String pattern_arg) :

Constructs a Simple Date Format using the given pattern – pattern_arg, default date format symbols for the default FORMAT locale.

```
import java.text.SimpleDateFormat;
import java.util.Calendar;

public class NewClass {

    public static void main(String[] args) {

        SimpleDateFormat dateFormat = new SimpleDateFormat("yyyy-MM-dd");

        // Creating instance of the System date
        Calendar cal = Calendar.getInstance();
        System.out.println("The Present Date is " + cal.getTime());
        // The Present Date is Tue Jun 21 20:23:31 KST 2022

        // Formatting Date according "yy-MM-dd"
        String formattedDate = dateFormat.format(cal.getTime());
        System.out.println("The Formatted Date is " + formattedDate);
        // The Formatted Date is 2022-06-21
    }
}
```

}
