## Intro

## Install

CentOS RedHat  
nslookup

```
[root@localhost~]# yum install bind-utils
```

Python

```
[user@localhost~]# python -V
Python 2.7.5
[user@localhost~]# pip -V
-bash: pip: command not found
[user@localhost~]# you install python3
...
...
...
[user@localhost~]# python3 -V
Python 3.6.8
```

- [CentOS7 Python 3](#)

## Case Study

## Library( )

- [\[CentOS 7/8\]](#) (httpd) PHP
- [\[CentOs\] centos7 php7.4](#)

# Term

## Tip

python (alternatives), java 가

```

[root@localhost ~]# python -V
Python 2.7.5
[dev@localhost ~]# update-alternatives --config python
[root@localhost ~]# update-alternatives --install /bin/python python
/bin/python2.7 1
[root@localhost ~]# update-alternatives --install /bin/python python
/bin/python3.6 2

[root@localhost ~]# update-alternatives --config python

2          'python'
.

-----
1          /bin/python2.7
*+ 2      /bin/python3.6

[+]
[root@localhost ~]# python -V
Python 3.6.8

```

- [\[CentOS 7\] Python3](#) [Tensorflow, Keras](#)

## Troubleshooting

- [/lib, /lib64](#)
- [Linux Rescue mode](#)

## Ref

, [centos](#), [alternatives](#),
