[Sass @import and Partials](#)

Sass Nested Rules

Sass CSS DRY(Don't Repeat Yourself,)
 DRY() 가 .

CSS reset file, , , , Sass .

Sass Importing Files

CSS 가 Sass @import (directive) .

@import .

CSS "@import" ; 가 HTTP

Sass "@import" CSS ; 가 HTTP

!

Sass Import Syntax

```
@import filename;
```

Tip:

가 . Sass .sass .scss 가

CSS 가 .@import , (mixins) .

가 .

```
@import "variables";
@import "colors";
@import "reset";
```

: "reset.scss" reset 가 .

SCSS Syntax (reset.scss)

```
html,
body,
ul,
ol {
  margin: 0;
  padding: 0;
}
```

"reset.scss" "standard.scss" .
 , 가 : @import 가 ;

SCSS Syntax (standard.scss):

```
@import "reset";

body {
  font-family: Helvetica, sans-serif;
  font-size: 18px;
  color: red;
}
```

, "standard.css" , CSS .

CSS output

```
html,
body,
ul,
ol {
```

```

margin: 0;
padding: 0;
}

body {
  font-family: Helvetica, sans-serif;
  font-size: 18px;
  color: red;
}

```

Sass Partials

Sass partials are files with the extension `.scss` or `.sass`. They are used to organize your code into smaller, reusable pieces. A partial is identified by a leading underscore character in its filename. For example, `_colors.scss` is a partial file. To use a partial, you use the `@import` directive in your main Sass file. The `@import` directive can take a partial filename as an argument, and the partial's contents are included in the main file. For example, the following code imports the `_colors.scss` partial:

Sass Partial Syntax

```
_filename;
```

For example, to import the `_colors.scss` partial into `colors.css`, you would write the following code in `colors.css`:

`"_colors.scss":`

```

$myPink: #EE82EE;
$myBlue: #4169E1;
$myGreen: #8FBC8F;

```

partial `"_colors.scss"` 가

```

@import "colors";

body {
  font-family: Helvetica, sans-serif;
}

```

```
font-size: 18px;  
colors: $myBlue;
```
