  margin: 0;
  padding: 0;
}

body {
  font-family: Helvetica, sans-serif;
  font-size: 18px;
  color: red;
}
```

## Sass Partials

Sass partials are files that end in `.scss` and are used to organize your code. They are imported into a main file using the `@import` directive. For example, if you have a partial named `_colors.scss`, you can import it into `styles.scss` like this:

```
@import "_colors";
```

The underscore at the beginning of the filename is a convention that tells Sass that this is a partial. The `@import` directive is used to include the styles from the partial into the main file.

## Sass Partial Syntax

```
_filename;
```

```
(
  "_colors.scss"
  "colors.css"
):
```

"\_colors.scss":

```
$myPink: #EE82EE;
$myBlue: #4169E1;
$myGreen: #8FBC8F;
```

partial `_colors.scss` 가 Sass `"_colors.scss"` 가

```
@import "colors";
```

```
body {  
  font-family: Helvetica, sans-serif;  
  font-size: 18px;  
  colors: $myBlue;
```
