Sass Nested Rules

Sass CSS DRY(Don't Repeat Yourself,) .
 DRY() 가 .
 CSS , Sass .
 reset file, , , , .

Sass Importing Files

CSS 가 Sass @import (directive) .
 @import .
 CSS "@import" ; 가 HTTP
 Sass "@import" CSS ; 가 HTTP
 !

Sass Import Syntax

```
@import filename;
```

Tip:

가 . Sass .sass .scss 가
 CSS 가 . @import (mixins) , (the main file)

가

```
@import "variables";
@import "colors";
@import "reset";
```

: "reset.scss" reset 가 .

SCSS Syntax (reset.scss)

```
html,
body,
ul,
ol {
  margin: 0;
  padding: 0;
}
```

"reset.scss"

"standard.scss"

.

: @import 가 ;
, 가 .

SCSS Syntax (standard.scss):

```
@import "reset";

body {
  font-family: Helvetica, sans-serif;
  font-size: 18px;
  color: red;
}
```

, "standard.css"

, CSS

.

CSS output

```
html, body, ul, ol {
  margin: 0;
```

```
padding: 0;
}

body {
  font-family: Helvetica, sans-serif;
  font-size: 18px;
  color: red;
}
```

Sass Partials

Sass partials are files that end in `.scss` and are used to organize your code. They are imported into a main file using the `@import` directive. For example, if you have a partial named `_colors.scss`, you can import it into `styles.scss` like this:

```
@import "_colors";
```

The underscore at the beginning of the filename indicates that it is a partial. The `colors` part is the name of the partial. The `.scss` extension is optional, as Sass can infer the file type from the context.

Sass Partial Syntax

```
_filename;
```

```
(
  "_colors.scss"
  "colors.css"
):
```

"_colors.scss":

```
$myPink: #EE82EE;
$myBlue: #4169E1;
$myGreen: #8FBC8F;
```

partial `_colors.scss` is imported into the main file `styles.scss` using the `@import` directive.

```
@import "colors";

body {
  font-family: Helvetica, sans-serif;
  font-size: 18px;
```

```
colors: $myBlue;
```
