  color: red;
}

```

## Sass Partials

Sass partials are files that end in `.scss` and are used to organize your CSS. They are imported into a main file using the `@import` directive. For example, if you have a partial named `_colors.scss`, you can import it into your main `styles.scss` file like this:

```
@import "_colors";
```

The underscore at the beginning of the partial name indicates that it is a partial. The `colors` part is the name of the partial. The `.scss` extension is optional, as Sass can infer the file type from the context.

## Sass Partial Syntax

```
_filename;
```

```
(
  "_colors.scss"
  "colors.css"
):
```

"\_colors.scss":

```

$myPink: #EE82EE;
$myBlue: #4169E1;
$myGreen: #8FBC8F;

```

partial `_colors.scss` 가

```

@import "colors";

body {
  font-family: Helvetica, sans-serif;
}

```

```
font-size: 18px;  
colors: $myBlue;
```
