```
import com.intellij.database.model.DasTable
import com.intellij.database.model.ObjectKind
import com.intellij.database.util.Case
import com.intellij.database.util.DasUtil
import com.intellij.psi.codeStyle.NameUtil

import javax.swing.*

/**
 * @author shirohoo
 * @link https://github.com/shirohoo/create-automation-jpa-entity
 * @param packageName , primaryKey
 *
 * <pre>
 *
 *     this script's default primary key strategy is
 * @GeneratedValue(strategy = GenerationType.IDENTITY)
 *     and specialized in Microsoft SQL Server
 *     and finally implemented Serializable so recommend that create serial
 * version UID
 *
 *     first. enter your project package name. for example:
 *     > com.intellij.psi
 *
 *     second. enter primary key column name of target database table.
 *     this script is convert input to camel case. for example 1:
 *     > table primary key column name = MEMBER_ID
 *     > enter primary key = memberId
 *
 *     example 2:
 *     > table primary key column name = ID
 *     > enter primary key = id
 *
 * </pre>
 */
